

GDR-AIEM : annual meeting 2025

Miguel de Navascués

2025-11-07

Last 5 to 7 November 2025 there was the [Annual Meeting of the GDR-AIEM](#) at the hameau de l'Étoile, in Saint-Martin de Londres (France). Two people from our group at CBGP presented their work. [Paul Bunel](#), presented his work on the use of Hidden Markov Models for the inference of effective population size and selection coefficient of loci under selection from temporal series of genetic data. [Jules Romieu](#) presented his work using simulation based inference for characterising the proportion of the genome that is affected by adaptive introgression.
